

Notice to all Bidders.

TENDER ADDENDUM AND CLARIFICATION No. 9 (TAC 9)

RE: Procurement of Plant, Design, Supply and Installation of the 220kV Mariakani - Dongo Kundu Transmission Line and Associated Substations (KETRACO/PT/045/2023)

The following amendments are made to the specified provisions for the bidding documents for procurement of plant, design, supply and installation of the 220kV Mariakani - Dongo Kundu Transmission Line and Associated Substations (KETRACO/PT/045/2023).

Save where expressly amended by the terms of this clarification, the Principal Tender Document shall continue to be in full force and effect.

Find herein the ADDENDUM and CLARIFICATION No. 9, consisting of eighteen (18) pages into the Principal Tender Documents as attached. This document should be returned along with duly filled Form of Tender.

All other terms and conditions of the Request for Bids document remain the same.

PETER NJEHIA
SENIOR MANAGER, SUPPLY CHAIN

Tender Addendum and Clarification No. 9 of Tender No. KETRACO/PT/045/2023 has been received and incorporated in the Tender Documents.

Name of Tenderer (in block letters): _____

Signature: _____

Date: _____

**Signed for the Tenderer by

A. ADDENDUM NO. 9.

The following amendments have been made to the bid documents.

i. Employers Requirements

Section VI-1B-05 Steel Tower Design

5.13 Aircraft warning markers, obstruction lights and tower painting

In restricted areas and pipeline crossings Aircraft Warning Markers (AWM) shall be fitted to the earth conductors and Air Traffic Obstruction Lights (ATOL) on the towers in order to satisfy requirements of Authorities. Where required by KETRACO, ATOL shall also be installed on the highest phase line conductor(s) and the towers shall be painted as specified.

- a. **Aircraft Warning Markers.** Where required AWM shall be spherical of 600 mm diameter and manufactured in fiberglass. The spheres shall be coloured International Orange which shall not fade when subjected to the direct rays of the sun. They shall be manufactured in two halves and designed such that assembly and attachment to the earth conductor is simple.

Provision for drainage shall be provided. Suitable clamping devices shall be provided which will not damage the conductor but will prevent the sphere from twisting or slipping on the conductor. All metal parts used for holding the spheres in position shall be of mild steel and galvanized.

The warning spheres shall be fixed on the earth conductor in any required span and shall be erected, as required by Chapter 6 of Annex 14 to the ICAO Regulations, at intervals of not more than 30 meters on the overall earth conductor system.

The first and last spheres in any span shall be approximately 10 meters from the towers defining the span.

With twin earth conductors, provided the spacing of the spheres on either earth conductor is suitably staggered to provide the above requirements, the placing of the spheres can be alternated between the two earth conductors at uniform spacing.

- b. **Air Traffic Obstruction Lights on Towers.** Where required ATOLs shall be installed on the towers defining the span, of International Standard red in colour, and having the following general features:

- I. conforming to Chapter 6 of Annex 14 to the ICAO Regulations
- II. two lamps per tower of which only one may be lit at a time (by utilizing a switch-over relay)
- III. having minimum luminous flux of approximately 10 candela, steady aviation red light
- IV. having minimum lamp life time of approximately 20 000 hours.
- V. all components shall be corrosion-proof for use in marine and damp tropical climate conditions.

The system offered shall be comprehensive and complete in every respect. If a system fed by cables is proposed, it shall be designed to withstand the induced high voltage that can occur during earth fault conditions. It shall consist of a constant current regulator, high voltage cable, dimmer switch, protection equipment, insulating transformers, lightning arresters, etc. The connection and cabling to the nearest available safe mains supply shall be deemed to be included.

Should a solar powered system be proposed, the battery supplied shall be able to maintain the minimum luminous flux of 10 candela under the condition of dusty solar cells. A battery maintenance interval of 5 years minimum shall be guaranteed. Photovoltaic panel output shall be de-rated, over and above age de-rating, by 40%, on account of dust accumulation on the panel surface. The upper edges of the solar panels shall be fitted with stainless steel needle strips, effectively preventing birds from sitting in these locations.

It shall be noted that the supply of equipment shall include the necessary spare parts as per the manufacturer's recommendations, for a service period of five years, the cost of which is to be included in the price quoted.

The tower obstruction light system shall be to the approval of the Engineer.

- c. **Aviation Warning Paint on Tower.** Where required and to comply with requirements of Authorities certain towers may need to be painted with two coats of approved epoxy resin type paint with red and white strips of widths complying with ICAO Regulations. The life span of the paint system shall be not less than 10 years and the colours shall not fade within this time under strong sun radiation.

ii. **Specifications**

The following section has been modified as attached to this Tender Addendum and Clarification No. 6.

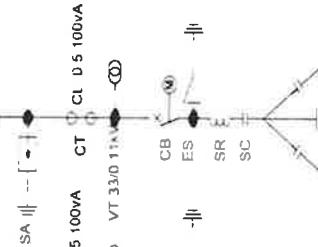

- a) Power Line Aerial Markers Specifications

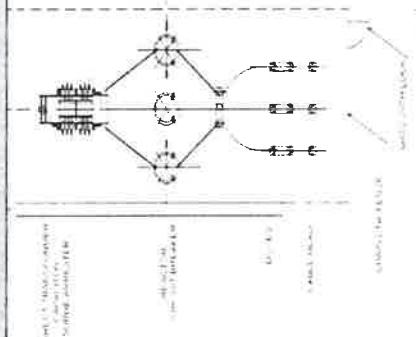

B. Clarification No. 9

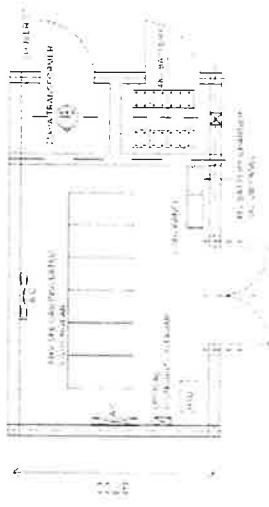

No.	Volume Part / Page	Section / Clause No.	Reference	Clarification	Reply from KETRACO
1	Volume V of VII 37-Section-VI-2E- Drawings	2-MSEZ-2022-GN- E-002- IMPLEMENTATION SCHEDULE		In order to see more clear schedule of this Project, please also show schedule of other Japanese Yen Loan and Grant projects in Mombasa Special Economic Zone. Please clarify the commencement of the works for the followings (1) - (3). We are considering that the construction of distribution line of this project will be affected by the schedule of the Road project and the Port project. (1) Road project (2) Port project (3) Grant project	The latest schedule will be given to the successful bidder.
2	Volume I Bidding Documents Part I Bidding Procedures BDS-3	Section II Bid Data Sheet ITB 11.2 (j)		The Bidder shall submit the following additional documents in its Technical Bid: 1. Documents proving their eligibility for registration with NCA (National Construction Authority) class 1 in Kenya.	Refer to paragraph 6 of the Form of Invitation for Bids. Bidding will be conducted in accordance with the Guidelines for Procurement under Japanese ODA Loans (Special Terms for Economic Partnership – STEP apply).
3	03-Disconnectors & Earthing Switches Rev No 4 3.2 / VI-2B-03 - 2	Section VI-2B: Specifications - Substations		The disconnectors shall be of the single phase, double side break type, equipped with motorized drive or single phase, single side break type, equipped with motorized drive.	Please confirm double side break type or single side break type? single phase separate control or three phase control together?
4	10-Section VI-2B- 06-Specifications- Power	Transformer Specifications- 1.25/1.26	=DISPIMG("ID_C9A1B7C47E63435 C85479B99B7307056",1)	Please clarify the no-load losses and load losses	Refer to Tender Addendum and Clarification No. 2, Section III "Evaluation and Qualification Criteria"

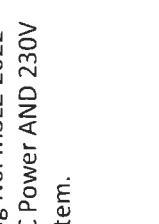

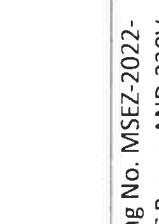

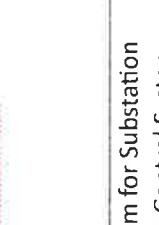

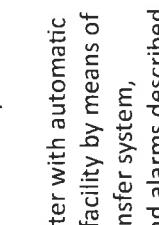

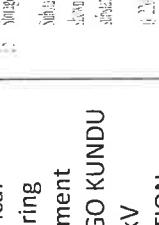

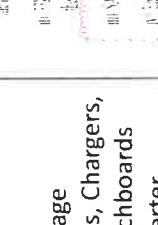

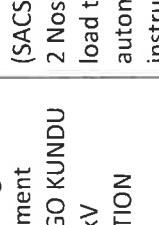

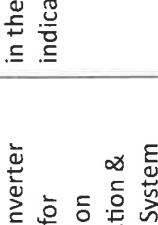

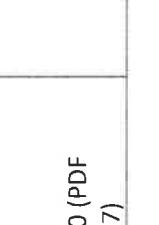

No.	Volume Part / Page	Section / Clause No.	Reference	Clarification	Reply from KETRACO
	Transformer-20230704 55				
5	Volume I - PART 1_20231227_58-59 1	Transformer Specifications-1.21	=DISPIMG("ID_D0EC231FC80F4499A30F176A209B3AC0",1)	Please clarify the no-load losses and load losses	Refer to Tender Addendum and Clarification No. 2, Section III "Evaluation and Qualification Criteria"
6	04-Section VI-1B_01_General-20231114 33	1.35 Accommodation and Site Storage	The Contractor shall make his own arrangements with regard to accommodation for his expatriate and locally recruited staff during the construction period	Please Clarify Accommodation for locally recruited staff can be replaced by housing allowance	The contractor shall make his own arrangement as stated in Sub-clause 1.35 "Accommodation and Site Storage" of Volume II, Section VI-1B-01.
7				The Bidder understands that PVoC and CoC for any imported goods/ equipment for the Project (including Permanent materials/ Temporally materials/ the Contractor's own equipment) shall be waived and the Employer shall obtain certificate of PVoC waiver. Is the Bidder's understanding correct?	Refer to Tender Addendum and Clarification No. 7 item no. 19.
8	Volume VII of VII PART 3 Section VIII.Particular Conditions (Part A: Contract Data) PC-1	1.16 (A) The Contractor's Liabilities as to the payment taxes and duties	The Value Added Tax (VAT) for implementation of official aid funded project which has to be approved by the Cabinet Secretary for The National Treasury will be exempted.	Please clarify whether VAT imposed in Kenya to be paid by the Contractor to all of subcontractors, suppliers, service providers and expenses in connection with implementation of the Project and indicated in approved Master List shall be exempted and they shall not be required to pay output VAT to KRA.	The subcontractor, supplier, service providers are exempted from VAT for supplies made in connection with implementation of the Project ONLY.
9	Volume VII of VII PART 3 Section VIII.	1.16 (A) The Contractor's Liabilities as to the	Personal income tax on Japanese employees engaged in the implementation of the Project for their personal income derived	Other than immigration bond, permit fee and application fee are imposed on work permit/entry permit applicants. For Japanese staffs, all of charges and fees included but not	Bidders to undertake due diligence from relevant authorities. Any charges and fees required shall be at the Contractor's expense.

No.	Volume Part / Page	Section / Clause No.	Reference	Clarification	Reply from KETRACO
	Particular Conditions (PC)	payment taxes and duties	from Japanese companies operating as suppliers, contractors and/or consultants for the implementation of the Project ----- ----- No Pay	Limited to above shall be exempted. Is the Bidder's understanding correct?	
MSEZ-2022-SS-E-002-220-33kV Single Line Diagram	&	13-MSEZ-2022-SS-E-011-33kV Switching Capacitor Arrangement		<p>Equipment shown in the SLD (MSEZ-2022-SS-E-002-220) & 33kV Switching Capacitor Arrangement.</p> <p>1. SA not mentioned in GA drawing. 2. CT & VT is not mentioned in the GA drawing. 3. ES only mentioned in the SLD, but DS/ES is mentioned in the SLD.</p> <p>We therefore understand that we have to follow the SLD. Please give confirmation.</p> 	<p>Confirmed. SLD Drawing to be followed.</p>

No.	Volume Part / Page	Section / Clause No.	Reference	Clarification	Reply from KETRACO
11	11-MSEZ-2022-SS-E-009-CONTROL-PROTECTION INDOOR SWITCHGEAR ROOM ARRANGEMENT			As per Control-Protection Indoor Switchgear Room Arrangement (11-MSEZ-2022-SS-E-009) Future 33kV GIS SWGR is located at other room.	 <p>Future extension as shown in the drawing is space reserved for future switchgear. Provision shall be made for connection between the live and future switchgears through cable link.</p> <p>Note: The GIS Switchgear room is a one open room design without partitions.</p>
12	07-Section-VI-3B-04-Specifications- SF6 Ring Main Unit-20230704	4.4 Requirements iv. Cable Termination		The unit shall be complete with cable boxes and terminals suitable for three core XLPE copper and aluminum cables of up to 300mm ² . The unit supplied with	It is understood that termination suitable for up to 300 Sq.mm is also applicable for all outgoing feeders. Please confirm.
					Aluminum cable 300sq.mm is applied to distribution outgoing feeders, but cable specification and suitable termination kits shall be designed by the Contractor.

No.	Volume Part / Page	Section / Clause No.	Reference	Clarification	Reply from KETRACO
	VI-3-B-04-4 (PDF Pg. 5/12)		two complete sets of cable terminations (one for immediate connection and the other for spare).		
13	07-Section-VI-3B-04-Specifications-SF6 Ring Main Unit-20230704 &	4.4 Requirements i. Service conditions ii. Design and Construction	The equipment shall be suitable for continuous operation outdoor in tropical area at altitude of up to 1000m above sea level, humidity of up to 90%, average ambient temperature of +30°C with a minimum of 0°C and a maximum +40°C, heavy saline conditions along the coast and isokeraunic levels of up to 180 thunderstorm days per year. The Ring Main Unit shall be floor mounting type suitable for outdoor and indoor use. The floor fixing shall allow for mounting on a simple plinth with a flat surface.	As per Typical Arrangement of 33kV Local Substation/Switching Station RMU (Refer below snap) is located at inside Building. Hence, we proposed Operation & mounting is suitable for indoor type. Please confirm.	Confirmed.

1	Volume I - PART 1_20231227	Submission Requirement	Submission Requirement	It's understood, KETRACO requirement is only for the calculation report to confirm the short circuit strength. As suggested by factory, SC calculation can be submitted after completion of detail design. Further, as per IEC 60076-1 (Refer below snap), SC test will come under special test not under type test. Whereas KETRACO specification refer SC test as type test. The same to be addressed to KETRACO.	Confirmed.
27	1.1.3 Subcontractor for major item of the Works EQC-1 PDF Pg. 55/498	<ul style="list-style-type: none"> • Supply record • Outline drawing, • type test certificates issued by independent institution and less than 5 years old, • Quality Assurance manual, • ISO 9001 certificate or equivalent • Short-circuit strength verification as per NEC-60076-5 for the Power Transformer. • end-user certificates/letters from the utilities/clients • O& M Manual for 33kV GIS and 245kV circuit breakers 	1.1.4 Specified tests <p>a) Direct short circuit test (IEC 60076-3): b) Short-circuit test under simulated system operating conditions at rated voltage, no switch, with no protective devices. c) Short-circuit test for all of the transformer's protection systems. d) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices. e) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, without consideration of the effect of the protection system. f) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. g) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. h) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. i) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. j) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. k) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. l) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. m) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. n) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. o) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. p) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. q) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. r) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. s) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. t) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. u) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. v) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. w) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. x) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. y) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system. z) Short-circuit test under simulated system operating conditions at rated voltage, with no switch, with no protective devices, with consideration of the effect of the protection system.</p>	Bidder will quote Design review meeting price as per tender specifications requirement in Price Schedule No. 2: Design - Item no: 215 - Design Review Meeting? Kindly confirm.	
28	Volume III of VII-PART 2, 04-Section VI-2B-i-Specifications-Scope and Preliminary General	VI-2B-i-59 & VI-2B-i-60	4.28.1 Design Review Meeting	Bidder will quote Design review meeting price as per tender specifications requirement in Price Schedule No. 2: Design - Item no: 215 - Design Review Meeting?	Confirmed.

No.	Volume Part / Page	Section / Clause No.	Reference	Clarification	Reply from KETRACO
	Requirements- 20231114-4.28 Design Review Meeting, Training, Laptops, Testing and Simulation Kits			Also, the design review meeting will be held at contractors' sub-contractor premises i.e. India. Please accept our request?	Acceptable. Also refer to Tender Addendum and Clarification No. 5, item no. 27.
29	Requirements- 20231114-4.28 Design Review Meeting, Training, Laptops, Testing and Simulation Kits	Volume III of VII- PART 2, 04- Section VI-2B-i- Specifications- Scope and Preliminary General	4.28.1 Training VI-2B-i- 59 & VI-2B-i- 60	Bidder will quote HV Design Training as per tender specifications page no: VI-2B-i- 60, Please clarify /confirm following, KETRACO to confirm the price for HV design Training will be include in Schedule No. 5: Training -506 - Whole system operation and maintenance at site? Kindly confirm.	Refer to Tender Addendum and Clarification No. 2.
30	Requirements- 20230704 Design Review Meeting, Training, Laptops, Testing and Simulation Kits	Volume III of VII- PART 202-Section VI-2A-Scope of Work- Substations-	VI-2A-45 & VI-2A-46	C. OTHER REQUIREMENTS: As per world bank rates the Per diem allowance for Over Seas Training and FAT (factory Acceptance Test) and HV design training is USD 100 per person / Per day? Please confirm our understanding is correct.	Refer to Tender Addendum and Clarification No. 2.
